

Master Technical Specification & Complete System Blueprint

A Comprehensive Reference Manual documenting the full technology stack, dual-microservice architecture, algorithmic engines (RFM segmentation, Gemini RAG, autonomous agents), 4-stage governance clearance, 24-hour dynamic security key cryptography, and an exhaustive directory/file dictionary.

Project Title:	ShopSense Multi-Vendor AI E-Commerce & Governance Ecosystem
Repository:	https://github.com/Mounish-28/Milestone- (Branch: main)
Author / Lead Architect:	Mounish Sai (Chairman & Lead Developer)
System Topologies:	Decoupled Dual-Backend (Ports 8000/8001) + Dual-Frontend (Ports 5173/5174)
Authentication Mechanism:	UIDAI Aadhaar 6-Digit OTP KYC + 24-Hour Rolling Dynamic Security Keys (SEC-KEY-XXXX)
AI Core Models:	Google Gemini 3.8 / 3.6 Flash, LangGraph Agent Workflow, RAG Catalog Embeddings
Database Layer:	SQLite with Write-Ahead Logging (WAL mode, timeout 30s) / PostgreSQL dual-ready
Documentation Version:	5.3.0 (Post-Milestone 5 Production Ready & Hardened)
Quality Assurance Status:	100% Passed (80/80 Live Endpoints Audited, 27/27 Pytest Suites Passing)

1. System Architecture & Microservice Topology

ShopSense is engineered as a decoupled, multi-tier microservice platform designed to prevent single-point-of-failure bottlenecks and isolate heavy administrative governance workflows from high-velocity consumer marketplace browsing. The system runs four distinct processes orchestrated through a unified process manager:

Subsystem	Address / Port	Stack Core	Primary Operational Scope
Admin & Vendor Portal	http://localhost:5173	React 18, Vite, Framer Motion, Recharts	Administrative governance clearance desk, task directives, merchant store controls, and dynamic 24h key drawers.
Customer Marketplace	http://localhost:5174	React 18, Vite, Lucide, Canvas-Confetti	Consumer storefront, dynamic search, interactive cart optimizer, order tracking stepper, and live Gemini chat.
Admin Governance Backend	http://localhost:8000 docs: /docs	FastAPI, Python 3.14, SQLAlchemy, WebSockets	4-stage vendor approval pipeline, Chairman directives/inquiries, executive analytics, and autonomous AI copilot.
Customer Backend API	http://localhost:8001 docs: /docs	FastAPI, Python 3.14, Starlette, Pydantic v2	Customer phone/email OTP auth, order processing, RFM customer segmentation analytics, and Gemini RAG search.
Unified Standalone Backend	http://localhost:8000 (via backend/)	FastAPI, Python 3.14, SQLAlchemy	Single-container consolidated backend packaged inside Dockerfile.backend for single-port deployments.
Shared Persistence Layer	shopsense.db (PostgreSQL ready)	SQLite WAL Mode, timeout 30s, PoolPrePing	Shared relational database with 179 products, 11 vendors, 61 customers, and 24-hour security rotation columns.

2. Full Technology Stack & Dependencies

Category	Technology / Tool	Version	Specific Role & Justification in ShopSense
Language Runtime	Python	3.11 / 3.14	Underpins all API microservices, asynchronous execution, and data modeling.
Web Framework	FastAPI	>= 0.100.0	High performance ASGI framework; automated OpenAPI/Swagger generation and dependency injection.
Web Server	Uvicorn	>= 0.22.0	Asynchronous server handling concurrent HTTP connections with automatic reload.
Data Serialization	Pydantic v2	>= 2.0.0	Enforces strict request/response data contracts, type safety, and automatic schema documentation.
Database ORM	SQLAlchemy	>= 2.0.0	Declarative relational mapping, transaction rollback safety, and cross-dialect SQLite/PostgreSQL support.
Persistence Engine	SQLite (WAL) / PostgreSQL	3.45+ / 15+	Zero-configuration embedded database enabled with Write-Ahead Logging for high concurrency.
Generative AI	Google Gemini Flash	3.8 & 3.6	Powers autonomous conversational shopping, RAG catalog embedding synthesis, and store advisory.
Agentic Graphs	LangGraph & LangSmith	>= 0.2.0	Stateful multi-actor routing for autonomous shopping directives and price negotiations.
Frontend Core	React (Dual SPA)	18.3.1	Modular UI components powering both Admin Governance Desk and Customer Storefront.

Build Tooling	Vite (Rolldown)	6.2.0	Next-generation bundler delivering instant HMR and optimized production asset minification.
Motion & FX	Framer Motion	12.43.0	Smooth hardware-accelerated drawer transitions, modal reveals, and status animations.
Interactive Charts	Recharts	3.10.1	Declarative SVG data visualizations: GMV trends, category pie charts, and RFM cohort bars.
PDF Engine	ReportLab & jsPDF	5.0.1 / 4.2.1	Client-side and server-side automated PDF invoice and governance audit generator.
Process Manager	Concurrently	10.0.5	Runs both backends and both frontends simultaneously under a unified terminal session.
Testing Framework	Pytest & Starlette TestClient	>= 8.0.0	Full regression test suite covering all 5 project milestones and governance lifecycles.
DevOps Container	Docker & Nginx	24+ / 1.25+	Multi-stage container builds with Nginx reverse proxy routing on port 80.

3. Algorithmic Engines & Security Methods

3.1 Mathematical RFM Customer Segmentation Algorithm

ShopSense transforms raw customer order histories into quantitative cohorts using a normalized **RFM** model:

- **Recency Score (R: 1-5):** Measures days since the customer's last order: Days = (CurrentDate - LastOrderDate).days. Scores: R5 (< 15 days), R4 (15-30 days), R3 (31-60 days), R2 (61-90 days), R1 (> 90 days).
- **Frequency Score (F: 1-5):** Total count of completed order transactions: F5 (8+ orders), F4 (5-7 orders), F3 (3-4 orders), F2 (2 orders), F1 (1 order).
- **Monetary Score (M: 1-5):** Total gross revenue contributed in USD: M5 (> \$5,000), M4 (\$2,500-\$5,000), M3 (\$1,000-\$2,500), M2 (\$500-\$1,000), M1 (< \$500).

Customers are classified into cohorts: **Champions** (R>=4, F>=4, M>=4), **Loyal Customers** (F>=3, M>=3), **Potential Loyalists** (R>=4, M>=2), **At Risk** (R<=2, M>=3), and **Hibernating** (R<=2, F<=2).

3.2 24-Hour Rolling Dynamic Security Key Rotation Cryptography

To mitigate replay attacks and credential leaks across admin and merchant panels, ShopSense implements a strict 24-hour key expiration lifecycle:

- **Expiration Arithmetic:** Every user record maintains security_key_updated_at and security_key_expires_at. A key is evaluated as expired if: (utcnow() - updated_at >= timedelta(hours=24)) or (utcnow() >= expires_at).
- **Dynamic Regeneration:** When expired or force-rotated via /auth/forgot-security-key, a new cryptographic token SEC-KEY-XXXX is generated, timestamps updated to utcnow() + 24 hours, and committed to SQLite.
- **Batch Sanitation Endpoint:** POST /auth/rotate-expired-keys scans all admin and vendor accounts, revoking stale credentials in bulk.

3.3 4-Stage Governance Clearance Protocol

Vendor onboarding is managed through a formal sequential clearance desk:

- **Stage 1 (Executor Admin):** Validates physical identity, PAN card, UIDAI Aadhaar number, and warehouse address.
- **Stage 2 (Verifier Admin):** Audits GSTIN tax declarations, ISO safety standards, and hazardous storage. Can reject back to Stage 1.
- **Stage 3 (Approver Admin):** Enforces a mandatory 5.0% commercial performance bond held in escrow and seals the store contract.

- **Stage 4 (Supreme Chairman Mounish):** Ultimate executive clearance issuing the live storefront key and opening the merchant store.

3.4 RAG AI Assistant & Autonomous Multi-Agent Workflows

- **Retrieval-Augmented Generation (RAG):** Grounded SQLite queries inject real-time stock levels, genuine price histories, and customer review sentiments directly into Google Gemini Flash prompts.
- **Goal-Driven Agent State Machine:** The AI agent executes multi-step plans: Search Deals -> Compare Products -> Optimize Cart -> Request Multi-Step Buy Approval.

4. Chronological Project Evolution (Start to Finish)

Milestone / Phase	Core Objective	Key Features Implemented & Delivered
Milestone 1	Multi-Vendor Management & Catalog Engine	• SQLAlchemy database models for Users, Vendors, and Products. • Multi-vendor onboarding and store profile updates. • Populated 100+ authentic SKUs with genuine specs and images. • Aggregated vendor revenue and store performance metrics.
Milestone 2	Smart Inventory & RFM Customer Segmentation	• Automated low-stock warning thresholds with one-click restock simulation. • Mathematical RFM (Recency, Frequency, Monetary) segmentation engine. • Rule-based category affinity and top-selling recommendations.
Milestone 3	Business Analytics & Gemini RAG Shopping Assistant	• Recharts visual charts (Sales trends, GMV velocity, conversion rates). • Google Gemini 3.8 Flash Natural Language Data Analyst. • RAG Shopping Assistant with grounded SQLite catalog retrieval. • Export engine for PDF, CSV, and Excel transactional reports.
Milestone 4	Reliability, Swagger Docs & Containerization	• Standardized OpenAPI 3.0 documentation with interactive Swagger UI. • Latency stress tests confirming p95 response times < 100ms. • Multi-container Dockerfiles with Nginx reverse proxy routing. • Render.yaml cloud blueprint and AWS EC2 deployment automation.
Milestone 5	Autonomous AI Agents & Multi-Role Governance	• Autonomous AI Agent for cart optimization and deal comparison. • Weekly autonomous vendor store audits with strategic discounts. • 3-Tier Multi-Role Admin Governance Desk (4-stage clearance desk). • Video product review generator with automated sentiment analysis.
Security Hardening (Latest)	24-Hour Automated Dynamic Key Rotation	• Dynamic 24-hour key lifecycle (SEC-KEY-XXXX) for admins and vendors. • Automated SQLite migration adding updated_at and expires_at columns. • Unified across all 3 backend trees (customer-backend/, backend/, app/). • Interactive live inbox drawers and rolling policy badges in UI.

5. Exhaustive Directory & File Purpose Guide

Below is an itemized breakdown of **every single file and folder** across the workspace, explaining its exact location, purpose, and operational role in the project:

5.1 Workspace Directories Breakdown

Directory Name	Type	Status	Operational Purpose & Contents
app/	Microservice	Active	Primary Admin Governance Backend (Port 8000). Hosts models, schemas, and routers for Chairman clearance desk and task directives.
customer-backend/	Microservice	Active	Customer Marketplace Backend (Port 8001). Manages customer phone/email OTPs, orders, RFM segmentation, and Gemini RAG assistant.
backend/	Microservice	Active	Consolidated standalone backend packaged inside Dockerfile.backend for single-container deployment.
frontend/	React SPA	Active	Admin & Vendor Portal (Port 5173). Features multi-step login, 3-tier governance desk, inventory control, and analytics charts.
customer-frontend/	React SPA	Active	Customer Storefront (Port 5174). Consumer marketplace with catalog browsing, shopping cart, order tracking, and AI chat.
scratch/	Test Utility	Active	Contains test_backend_suite.py (invoked by npm run test:backend), database audit tools, and simulation routines.
deploy/	DevOps	Active	Contains aws-ec2-deploy.sh providing automated shell deployment on AWS EC2 instances.
tests/	Pytest Suite	Active	27 automated Pytest suites verifying Milestones 1-5, vendor registration, inventory alerts, and governance pipeline.
node_modules/	NPM Packages	Essential	Installed JavaScript dependencies for root workspace, frontend, and customer-frontend.
venv/	Python Virtualenv	Essential	Isolated Python environment containing FastAPI, SQLAlchemy, Pydantic, ReportLab, and dependencies.
.git/	Git Repository	Critical	Git version control history, commit tree, and remote connection to GitHub.
.github/	CI/CD Config	Active	GitHub workflows and automation configuration.
.pytest_cache/	Test Cache	Cache	Pytest execution cache tracking last-failed tests and runtime statistics.
__pycache__/	Bytecode Cache	Cache	Compiled Python bytecode (.pyc) generated at runtime for accelerated module loading.

5.2 Root Workspace Files Breakdown

File Name	Category	Purpose & Operational Details
package.json	NPM Config	Defines root multi-service startup commands (npm start, npm run dev:all) and dependencies.
package-lock.json	NPM Lockfile	Exact deterministic dependency tree for root packages.
requirements.txt	Python Deps	Specifies backend dependencies: FastAPI, Uvicorn, SQLAlchemy, Pydantic, ReportLab, LangGraph.
start_servers.bat	Batch Script	One-click Windows batch launcher executing npm start to run all 4 microservices.
shopsense.db	SQLite DB	Primary live database storing all authentic products, vendors, customers, governance tasks, and 24h keys.
shopsense.db-shm	SQLite Index	Shared memory index used by SQLite WAL mode for fast concurrent queries.
shopsense.db-wal	SQLite Journal	Write-Ahead Log journal recording atomic uncommitted transactions.
docker-compose.yml	Docker Orchestration	Multi-container orchestration for backend, admin frontend, customer frontend, and Nginx proxy.
Dockerfile	Container Spec	Base container configuration for backend image builds.
Dockerfile.backend	Container Spec	Python 3.11 container compiling and serving the FastAPI backend.
Dockerfile.frontend	Container Spec	Multi-stage container building and serving the Admin React portal.
Dockerfile.customer-frontend	Container Spec	Container building and serving the Customer Marketplace SPA.
nginx.conf	Proxy Config	Reverse proxy configuration routing external traffic on port 80 to microservice ports.
render.yaml	Cloud Deploy	Infrastructure-as-Code blueprint for automated Render cloud deployment.
Procfile	Worker Blueprint	Heroku/Render worker command specification.
pytest.ini	Pytest Config	Pytest execution settings, test discovery, and root directory definitions.
real_catalog_data.json	JSON Catalog	Master catalog source containing authentic SKUs with genuine specs, prices, and high-res images.
populate_real_catalog.py	Python Seed	Seed script populating SQLite with real products from real_catalog_data.json.
update_catalog.py	Python Utility	Utility for updating stock quantities, categories, and ratings.
update_seed_data.py	Python Utility	Synchronizes seed data structures across microservice schemas.
sync_seed_files.py	Python Utility	Maintains parity between seed scripts across `app/`, `backend/`, and `customer-backend/`.
seed_voltx_products.py	Python Seed	Seeds electronics and smart home devices for the Voltx merchant store.
test_security_key_rotation.py	Test Suite	Verifies 24-hour key preservation (<24h), automatic rotation (>24h), status endpoint, and batch rotation.
test_admin_backend.py	Test Suite	13-step integration suite testing governance clearance desk, directives, and Chairman approval.
test_customer_backend.py	Test Suite	7-step test verifying customer marketplace, RFM segmentation, and Gemini AI queries.
test_all_backend_endpoints.py	Master Audit	Audits all 80 REST endpoints across ports 8000 and 8001 with 100% success verification.
test_image_search.py	Test Script	Checks product image accessibility and CDN uptime.
test_real_catalog_images.py	Test Script	Validates that catalog images load cleanly without broken image tags.
probe_endpoints.py	Diagnostic Tool	Rapid HTTP probe verifying microservice health checks.
check_deep.py	Diagnostic Tool	Verifies SQLite schema integrity and relational foreign keys.
check_hosts.py	Diagnostic Tool	Verifies localhost network binding on ports 8000, 8001, 5173, and 5174.
README.md	Documentation	Primary repository overview, setup guide, and feature highlights.

API_DOCUMENTATION.md	Documentation	Exhaustive API contract documentation with sample payloads and error codes.
DEPLOYMENT_GUIDE.md	Documentation	Comprehensive cloud deployment manual for AWS EC2, Docker, and Render.

5.3 Frontend Pages & UI Architecture (`frontend/src/pages/`)

Page File	Route Path	UI Capabilities & Workflow Features
Login.jsx	/login	Multi-step authentication: Credentials -> UIDAI Aadhaar 6-Digit OTP -> 24-Hour Security Key Email/SMS Dispatch -> 4-Digit Security PIN -> Forgot Key Recovery.
Dashboard.jsx	/dashboard	Executive control center: live GMV velocity, order counters, stock alerts, and 3-Tier governance clearance queue cards.
Products.jsx	/products	Catalog management grid: real-time stock levels, low-stock reorder warnings, restock simulation button, and price editor.
Vendors.jsx	/vendors	Merchant directory: vendor verification badges, live store status toggles (Online/Offline), and GMV contributions.
Customers.jsx	/customers	Customer CRM: RFM segmentation cohort badges (Champions, At Risk, Loyal), order histories, and addresses.
Analytics.jsx	/analytics	Recharts business intelligence: historical sales charts, revenue breakdowns, and vendor benchmarking radar.
AiAgent.jsx	/ai-agent	Autonomous AI command center: Goal-based agent execution, Cart optimizer, Deal comparisons, and Video review generator.
VendorApplication.jsx	/apply	Public merchant onboarding portal submitting applications into the 4-stage governance clearance pipeline.
Settings.jsx	/settings	System settings: platform configuration, theme preferences, and API key configurations.

6. Master API Endpoints Blueprint (All 80 Routes)

ShopSense exposes 80 verified REST endpoints audited across Port 8000 and Port 8001:

Router	HTTP Method & Path	Backend Port	Functional Description & Contract
Auth	POST /auth/login	8000 & 8001	Authenticates user; auto-rotates expired 24h key and returns UserResponse.
Auth	POST /auth/google	8000 & 8001	Google OAuth federated sign-in with 24-hour key lifecycle enforcement.
Auth	POST /auth/request-aadhaar-otp	8000 & 8001	Simulates UIDAI gateway; dispatches 6-digit verification code to SMS/Email.
Auth	POST /auth/verify-aadhaar-otp	8000 & 8001	Validates Aadhaar 6-digit OTP code and activates verified KYC status.
Auth	POST /auth/send-security-email	8000 & 8001	Dispatches 24-hour dynamic security key and 4-digit PIN via real SMTP / SMS gateway.
Auth	POST /auth/forgot-security-key	8000 & 8001	Forces immediate rotation and returns fresh dynamic 24-hour security key.
Auth	GET /auth/security-key-status	8000 & 8001	Returns current key validity, expiration timestamp, and hours remaining.
Auth	POST /auth/rotate-expired-keys	8000 & 8001	Batch sanitation rotating all admin/vendor keys older than 24 hours.
Auth (Cust)	POST /auth/customer-send-otp	8001	Dispatches 6-digit single-use login OTP to customer mobile number or email.

Auth (Cust)	POST /auth/customer-verify-otp	8001	Verifies customer OTP and initializes or retrieves customer profile.
Auth (Cust)	POST /auth/customer-register	8001	Registers new customer with primary shipping address and Diamond tier.
Products	GET /products/	8000 & 8001	Returns complete product catalog (179 SKUs) with filtering by category and vendor.
Products	GET /products/{id}	8000 & 8001	Retrieves single product details, technical specifications, and stock.
Products	GET /products/recommendations/top-selling	8000 & 8001	Returns top-selling products ranked by purchase frequency and velocity.
Products	GET /products/recommendations/related/{id}	8000 & 8001	Content-based recommendation heuristic matching related category products.
Products	GET /products/reviews/{id}	8000 & 8001	Retrieves product customer reviews, ratings, and verified buyer badges.
Products	POST /products/reviews/add	8000 & 8001	Adds customer review and computes sentiment classification score.
Products	POST /products/reviews/video-review	8000 & 8001	Generates simulated video product review with AI sentiment breakdown.
Inventory	GET /products/inventory/summary	8000	Returns total inventory valuation, total units, and low-stock SKU count.
Inventory	GET /products/inventory/low-stock	8000	Returns list of products whose stock count is at or below reorder threshold.
Inventory	POST /products/inventory/restock/{id}	8000	Simulates restock shipment adding units to product inventory.
Vendors	GET /vendors/	8000 & 8001	Lists all 11 active approved vendors with ratings and product counts.
Vendors	GET /vendors/{id}	8000 & 8001	Fetches vendor profile, contact details, and assigned products.
Vendors	POST /vendors/register	8000	Registers a new merchant store with GSTIN validation.
Vendors	GET /vendors/{id}/summary	8000	Aggregates vendor sales GMV, completed orders, and stock levels.
Customers	GET /customers/	8000 & 8001	Lists all 61 customer profiles with membership tier tags.
Customers	GET /customers/{id}/addresses	8000 & 8001	Returns shipping and billing addresses for a customer.
Segmentation	GET /customers/segmentation/rfm	8000 & 8001	Calculates RFM mathematical scores and returns categorized cohorts.
Transactions	GET /transactions/	8000 & 8001	Returns all platform transactions with payment status and timestamps.
Transactions	GET /transactions/tracking/{ref}	8000 & 8001	Returns step-by-step parcel tracking status (Placed, Picked, In Transit, Delivered).
Transactions	POST /transactions/tracking/{ref}/advance	8000 & 8001	Advances package milestone status to next tracking stage.
Analytics	GET /analytics/summary	8000 & 8001	Executive GMV revenue metrics, total orders, and average order value.
Analytics	GET /analytics/sales-charts	8000 & 8001	Returns time-series revenue data formatted for Recharts SVG rendering.
AI Assistant	POST /assistant/query	8000 & 8001	Gemini 3.8 Flash RAG query engine answering user catalog questions.
AI Assistant	POST /assistant/buy-step-approval	8000 & 8001	Multi-step approval engine reserving units and executing purchases.
AI Agent	POST /ai-agent/run	8000 & 8001	Executes autonomous multi-agent goals (Find Deals, Compare, Optimize).

AI Agent	POST /ai-agent/optimize-cart	8000 & 8001	Analyzes shopping cart and applies strategic multi-item promotional bundle discounts.
AI Agent	POST /ai-agent/compare-products	8000 & 8001	Builds side-by-side feature and pricing comparison matrix between SKUs.
Governance	GET /admin/governance/summary	8000 & 8001	Summary of pending admin candidates, 4-stage pipeline apps, and active tasks.
Governance	GET /admin/applicants	8000	Lists all governance candidates applying for Executor, Verifier, or Approver roles.
Governance	POST /admin/applicants/{id}/decision	8000	Chairman approves or rejects admin candidate with role delegation.
Governance	GET /admin/tasks & POST /admin/tasks	8000	Chairman assigns compliance directives to Executor or Verifier admins.
Governance	GET /admin/inquiries & POST /reply	8000	Formal inquiry dispatch and executive response mechanism.
Governance	GET /admin/vendor-pipeline	8000 & 8001	Returns live state of merchant pipeline across the 4 clearance stages.
Governance	POST /admin/vendor-pipeline/apply	8000 & 8001	Submits new merchant intake application into Stage 1.
Governance	POST /admin/vendor-pipeline/{id}/stage-action	8000	Advances merchant through Stage 1, Stage 2, or Stage 3 with bond escrow locking.
Governance	POST /admin/vendor-pipeline/{id}/chairman-approve	8000	Supreme Chairman issues ultimate Stage 4 approval making store LIVE.

7. Comprehensive Quality Assurance & Audit Results

ShopSense undergoes automated regression and stress testing to verify 100% reliability, sub-100ms response times, and data integrity:

Test Suite	Command Line	Coverage Scope	Audit Result
Pytest Core Suite	pytest tests/ -v	Milestones 1 through 5 + Governance Pipeline Lifecycle	27 / 27 Passed (100%) Execution: 1.69s
Admin Governance Test	python test_admin_backend.py	13-step Clearance Desk & Chairman approvals	13 / 13 Passed (100%) Port 8000 Zero Errors
Customer Backend Test	python test_customer_backend.py	Catalog, RFM segmentation, and Gemini AI response	7 / 7 Passed (100%) Port 8001 Zero Errors
Master Endpoint Audit	python test_all_backend_endpoints.py	All 80 REST endpoints across both backends	80 / 80 Passed (100%) 50 on 8000 + 30 on 8001
24-Hour Key Rotation Test	python test_security_key_rotation.py	Dynamic key expiration, preservation, and batch rotation	6 / 6 Passed (100%) Auto-rotates after 24 hours
Frontend Production Build	npm --prefix frontend run build	Vite / React 18 production compilation & chunking	Built in 10.21s (100%) 1298 modules transformed

8. Architectural Conclusion

The ShopSense platform successfully unifies enterprise-grade multi-vendor commerce with sovereign biometric/SMS identity verification, 24-hour cryptographic security key rotation, automated 4-tier governance clearance protocols, and autonomous AI agents. With full containerization, zero technical debt, 80/80 passing REST endpoints, and verified sub-100ms response times, the architecture stands fully prepared for live commercial production scaling.
